

RGB-T / RGB-X SOT Lineage Sankey

Aggregated from Excel Parents: node height and flow width encode cross-stage lineage counts. Orange nodes/flows are datasets or benchmark influence.

Shown flow = 788 / 958 cross-stage parent edges (threshold >= 5). Same-stage edges (266) are omitted.

Dataset/benchmark nodes are separated from method categories; dashed orange flows indicate benchmark papers used as parents by later categories.
